Rocket® ChangeMan® ZMF Enterprise Release Option (ERO)

Accelerates mainframe application delivery

Enterprise Software Change and Configuration Management (SCCM) systems are facing greater demands: coordination across geographies, concurrent releases, and diverse technologies and platforms. Rocket Software offers a competitive edge with its top-tier, multi-platform SCM solutions — enhanced by Rocket Software's Enterprise Release Option (ERO) for Rocket® ChangeMan® ZMF. This extension addresses the challenges of managing multiple simultaneous releases in release-centric environments: streamlines processes, boosts productivity, and enhances quality management.

Benefits/Features

01 Automatically track dependencies

Having multiple releases in motion can create complex dependencies between components and releases, harming productivity. The Enterprise Release Option automatically tracks dependencies and opens communication between release teams.

02 Simple, consistent, and flexible release management

ERO makes it possible to establish and automate a consistent release management process. Organizations can manage releases as they move from development, testing, and finally into production.

03 Additional benefits

Protects against overlays and minimizes rework. Ensures the correct version deploys into production every time. Improves audit and compliance and automates communication between release management teams.

04 ChangeMan ZMF options

Db2®, Enterprise Release Option (ERO), IMS, InfoMan (INFO), Merge and Reconcile (M+R), ChangeMan ZMF Client Pack (Eclipse based IDE and Windows Explorer), and Online Forms Management (OFM).
